Considerations on the vibration . CO2 and H2S gases considerably increase the total water content and the dehydration requirements of gas currents. Reboilers and Chillers 1. Copper copper F. 7 / 4 43 . Mercury can be present in the ³ gas at the same time as H2S, as demonstrated by a LNG plant in Sumatra, Indonesia, containing 200-330 micrograms/Nm3 of mercury and 60-70 ppm of H2S. MarrÃ ³ n â Equation ³ welders for container dimensioning) (V l V D D D C Ã¢ Ì = W = Steam Load â #/Hr. /Sq. Ft. DV = Vapor Density â #Cu. Ft. under operating conditions D1 = Liquid Density â #Cu . Ft. C = Constant (a) For Absorbers, use 600 (b) For debuggers use 1100 (c) For StillÃa use 500 Example: Size of the sewage treatment plant for field engine discharge 3 / # 333 . Practical limits for columns packed to. Low-chromium steel tubes are recommended for high-temperature and sulfur-containing currents. The type of pad usually has less pressure cad³ n clean than the type of pallets. VÃolide for < 750 GPM and < 150 psi pump delta p VÃolide for > 300 GPM and 150 to 275 psi pump delta p If outside these ranges, the unallocated pressure caad can ³ be 25% of the dynamical pÃolides of the system at the nominal pump height, or 15 psi, whichever is greater. Fog removal devices ³ be located outside the container to maximize the potential for foam separation ³ inside the container. The ³ ratio between the passage and the diameter of the TEMA tube is 1.25. In the low pressure services ³ in the shell, TEMA J Shell capacitors are preferred, divided flow containing RODbaffle beams. 7. to allow the control of the level of the liquid. Columns.....5-1 6 COMBUSIÃ N 4. For water cooling, try to cool more than 10 ° F to the warm cooling water that leaves the condenser. Covers of cooling towers: spray ponds 1.0 to 5.0% circulation torres of atmosphery cooling 0.3 to 1.0% circulation forced exercise cooling towers 0.1 to 0.3% Evaporation pages are usually 0.85 to 1.25% of the tower circulation rate. Hydrates .... 10-4 E. for the flow of the bullet, GSV = 2 to 30 feet/s. G. 4. The combustion heater for organic transfer fluids of the rumical transfer usually design with average radiant heat flows ranging from 5000 to 12,000 Btu/HR-SQ FT. Speed: Lychid: 60 seconds of contact time, or 0.01 psi/ft ã ¢ â ¢ p (léquido). 3-11 Treatment references GPSA Engineering Data Book ¢ â ¢ Dé Cima Edition 1987 Processing, Vol. Ã ¢ â ¢ Use Rodbaffle exchangers when the vibrations of the tube are predicted. It now has a feasibility estimate that includes: 1. Distribution of sulfur compounds in the NGL product .... 3-8 4 FLUID .... 4-1 A. The C02 and other sulfur compounds do not affect the performance of the beds. This aspect must be taken into account when dimensioning the pipes and pumping facilities. P. 47-60 40. Selection of the fog extractor .... 1-4 2 Transfer heat exchangers and colored tube .... 2-1 A. As a general rule, a speed head less than 1.3 psi avoids excessive noise . Reboiler selection of reboiler the choice of the reboiler type is governed by the technical performance, the properties of the fluid, the dirt trends and the surface requirements, as shown in the libic diagram of Fig. Gas I. 15.18-5, Specifications of the heat exchanger Rodbaffle Phillips Engineering Standard 15.18-2, Mechanic Design of the air exchanger refrigerated by air refrigerated by air air Phillips Engineering Standard 25.04-85, General design, ³ and tube heat exchangers, Manufacturing requirements³ n mecÃ nica EngineerÃa Phillips 25.04-89, Perry heater design specifications, R. Attari â "Gas technology R. 10. D. D. D. D. D. . Fuel consumption..... .... 8-2 F. c. A fog removal pad should be ³. The recommended load in the tilt circuit ³ minimize the blinking of acid gases is: amine * Total load, M/M MEA 0.10 Ã¢ â - 0.15 DEA 0.05 Ã¢ â â 0.07 MDEA 0.004 Ã¢ â - 0.010 * These loads should be achieved with a 1.0 1.0 -2.0 m/m Reflux ³ of stripper. Heat exchangers (General) 1. Amine treatment .... 3-2 C. 11. Permitted shell pressure ³ for Rodbaffle should vary from 4 to 8 psi. Pressure waves ³ n (e.g. water hammer) .... 10-6 U. If the flow through the exchanger is not countercurrent, the hot fluid outlet temperature must be greater than the fluid outlet temperature frÃo. â¢ ¢ Do not design the heat exchanger for operation ³ the transition flow³ Feasibility design of the cooling water system: Feasibility designs for cooling water systems can be completed by setting the water temperature increase on all exchangers, generally 15 to 20 Â° F increase (or to a 10 Â° F approach at the process outlet temperature if the process exit if the process exit if amrofatalp amrofatalp al ed n³ÃicaivseD .lag 2 .5)sag(sodnuges 5.3 :saG .lov ,slaunaM ngiseD IRTH 3691 .de ªÂ4 ,11 n³ÃicceS ,lacimehC soreinegnI ed launaM ,.H .F °Â 8 s¡Ãm oitis led ademºÃh allibmob al ed arutarepmet al a serodaibmacretni sol a adartne ed auga led arutarepmet al ecelbatse y ,)rodaibmacretni nºÃgla arap arutarepmet ed zurc anu odatluser omoc ad odimusa otnemua lE es adilas ed osecorp O. Go to a pipe counting table and read the number of tubes necessary for the â¡rea a and the unit of the unit and/or the number of units. Suppliers report that the bed capacity is not affected if the bed is saturated with heavy -phase of the gas phase (provided that no free is allowed to communicate with the bed). In the majority of the cases, an approach to process flow of 10 ° F to the cold water to the exchanger is reasonable. NGL expanding plants .... 2-20 3. VESORES A PRESSURE .... .10-6 S. 2-22 34. The copper strip will not detect merchants or other orgal sulphides. Immediately. Various plant systems .... 2-21 P. E.: Trans. 2-17 Trying to vaporize more fluid can lead to problems with the flow of thermosters. The coefficients on the side of the tube are based on 3/4 diameter tubes. For internal and internal boiler services and all Rodbaffle exchangers, a 90 squares design is required. Take a finished product as distillate. To estimate the thickness of the isolation: thickness = {3 +[(t - 100)]} truncated / 2 thickness â,¬ - inches t (process temperature) ã ¢ & ° F 2. heat exchangers a. Limit the temperature approach in the gas exchanger to 20 ° F. catalyst sulfacion caused by SO3. 3-8 SCF/Glycol Gas Circ. H2S Gas Toxicity ppm gr./100scf 10 0.65 Can smell. Similar liquid removal efficiencies can be achieved (within certain velocity constraints) with mist particle sizes of 10 microns and larger. Horizontal Shellside Condenser Recommended Design Practices ¢ÃÂ¢Â Use for Noncorrosive, Low Pressure and Vacuum Service ¢ÃÂ¢Â Use when Frequent Mechanical cleaning is required ¢ÃÂ¢Â Limit Shellside Pressure Loss to less than 10% of Inlet Pressure ¢ÃÂ¢Â Evaluate Effects of Shellside p ¢ÃÂÂ on MTD for Mixtures ¢ÃÂ¢Â Use TEMA E Shell if Shellside p ¢ÃÂÂ Permits ¢ÃÂ¢Â Use Multiple ¢ÃÂÂE¢ÃÂÂ Shells in Series if Temperature PinchPredicated ¢ÃÂ¢Â Use TEMA J Shell with RODbaffle Bundles for Low Pressure Service ¢ÃÂ¢Â Shell and Baffle Type Governed by Following Shellside p ¢ÃÂÂ : Ã§Â Single Segmental E Shell: s p ¢ÃÂÂ = 10-20 psi Ã§Â Double Segmental E Shell: s p ¢ÃÂÂ = 5-10 psi Ã§Â RODbaffle J Shell: s p ¢ÃÂÂ = 1-5 psi ¢ÃÂ¢Â Design condenser for Shear Flow Regime ¢ÃÂ¢Â Use Vertical Baffle Cuts With Drainage Notches ¢ÃÂ¢Â Vary Baffle Spacing at Exit To Achieve Shear Flow ¢ÃÂ¢Â Design Outlet Nozzles to Avoid Shellside Condensate Flooding ¢ÃÂ¢Â Use Separate Exchanger for Condensate Subcooling 3. Pumped Circuit Allocating Pressure Drops to Control Valves: In a pumped circuit, the pressure drop allocated to the control valve should be 33% of all other friction losses in the system at pump rated flow (exclusive of the valve pressure drop itself) or 15 psi whichever is greater. 1, at the end of this section, may be used as a guide in selecting heat exchanger types. Low liquid level should be 8 to 12 inches above the bottom of the vessel or the height of the vortex breaker, if one is present. Fixed tubesheet exchangers having shell expansion joints should be avoided. COS will be concentrated mainly in the C3 streams. 8. Brazed Aluminum Plate Heat avg avg wall .065 14 BWG avg wall .083 1. Molecular sieve dehydrators: As strictly a general rule based on many Phillips designs, when the pressure ³ fall through a mole sieve bed reaches 20 psi, the bed support approaches its maximum load capacity and measures must be taken to reduce the cúda of presiÃ ³ n. 2-7 recommended for low temperature services (below 150F). Tuber Fan DataHartzell fan base, BoletÃn A-108-E, Hartzell Fan Inc. Engrs., 42, 741 (1946) Vertical thermosif design practicesÃ ³ n recommended Ã¢ â ¢ Output weight fractions Steam from 0.10 to 0.15 for hydrocarbons Ã¢ â ¢¢ Maximum FrictionÃ ³ Vapor Less than 0.30 for hydrocarbons Ã¢ â ¢ suitable for a wide range of ebulliciÃ ³ (Ã¢Ë â TB> 100F), low viscosity (m
